DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hartigan et al as applied above, in view of Cherukuri et al [Pat. No. 4,317,838]. Hartigan et al teach a method of coating confectionery centers with a syrup comprising 50-90% maltitol (column 3, lines 58 & 66), microcrystalline cellulose (column 1, line 40). 0-20% fat (column 1, line 66), and a lack of affect on the translucence of the confectionery center. The recitation "for coating sugar-free boiled sweets..." has not been given weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See In re Hirao, 535 F.2d 67, 190 USPQ 15 (CCPA) 1976) and Kropa v. Robie, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951). Hartigan et al do not recite magnesium silicate, or talc. Cherukuri et al teach a method of coating candy with talc (column 3, line 36). It would have been obvious to one of ordinary skill in the art to incorporate the talc of Cherukuri et al into the invention of Hartigan et al since both are directed to methods of coating candy, since Cherukuri et al

Art Unit: 1761

teach that the talc acted as an anti-sticking agent (column 3, line 36), and since the candy of Hartigan et al would have been packaged and thus required some means to prevent it from sticking to the wrapper.

Response to Arguments

3. Applicant's arguments filed February 7, 2005 have been fully considered but they are not persuasive.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a lack of crystallization) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Furthermore, applicant attributes crystallization to Hartigan et al mainly due to its use of microcrystalline cellulose and gum (MCC-GUM). However, claim 3 of the present application recites the use of "microcrystalline cellulose and derivatives thereof". It is not clear how the MCC derivatives of applicant can exclude crystallization, while those of Hartigan et al would require it.

Applicant argues that the methods of Hartigan et al and Cherukuri et al resulted in an opaque coating. However, neither of the references recite this affect. On the contrary, Hartigan et al teaches that the syrup coating produces an improved sheen and snap to its appearance (column 4, line 61).

Application/Control Number: 10/080,719

Art Unit: 1761

Applicant argues that a polyol content in excess of 70% would cause opaqueness. However, Hartigan et al teach that the syrup can have polyol contents as low as 15% (column 3, line 65; column 4, line 51) thus avoiding impairment of the confection's translucence.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Drew E Becker whose telephone number is 571-272-1396. The examiner can normally be reached on Mon.-Thur. 8am-6pm.

Application/Control Number: 10/080,719

Art Unit: 1761

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
